

# Concrete Renovation

# CS-21

## Clear

### Product Outline

Appearance: Colorless and transparent

Main component: Sodium silicate

Specific gravity (Density): 1.05 - 1.09 (g/cm<sup>3</sup>)

pH value: 11.3 - 12.3

Packaging style: 20 kg plastic container

## Surface Preparation Material / Silicate-based Surface Penetrant

The following aspects have been enhanced, maintaining the basic performance of CS-21 that fills minute voids with stable reactant (CSH crystal) generated with calcium, etc. by penetrating (impregnating) concrete and/or concrete sections through spraying and so on:

- Work period can be shortened as there is no need for sprinkling water before and after coating the material.
- Optimized as surface preparation material for renovating using polymer-cement mortar, etc.
- Can be used as surface protection material for repaired sections.

\* Please refer to "CS-21 Crack Repair Set" for use in combination with CS Putty.
